

Update on SJR 15 Health Care Facility Survey*

About half of the health care facilities contacted in Montana have responded to a survey sent out in early January to determine various characteristics and services of Montana health care facilities, including hospitals, ambulatory surgical centers, and imaging centers. The information request was included in Senate Joint Resolution 15. A sample of responses is available in Table 1. Given that incomplete information is not very helpful for the committee's review of competition among various services and providers, staff has begun contacting facilities by phone to obtain answers from the remaining health care facilities. An analysis of the information will be provided once more complete information is available.
