The Legislative Services Division is required to offer a brief history on the subject matter of a bill draft request prior to drafting. (5-4-105, MCA; Chapter 309, Laws of 2017) The history must include related legislation introduced over the last five sessions and hyperlinks to the bill, hearing information, and fiscal notes. The legislation links below open to the page showing the status and history of bills introduced on this topic in the past. The bill text and any related fiscal notes can be accessed through the link at the top of that page.

Legislation can be complex and this history is not intended to be exhaustive. Please contact the drafter of the requested bill for more information.

Background Materials and Research

**Topic Summary:** There are six coalmines in Montana located in Big Horn, Musselshell, Richland, and Rosebud Counties. Westmoreland Mining, LLC, controls three of the mines. In 2015 Montana was the sixth largest coal producer in the U.S. at 42 million tons mined. The majority of mining in Montana occurs in the Powder River Basin. The price of Montana coal averaged $17.44 per ton at the mine in 2015, up from the previous 20 years when it was near $10.00 per ton. The price of Montana and Wyoming coal is far below the U.S. average of $31.83, largely because of transportation costs and the lower heat content of the coal.

Following national trends, production decreased in Montana from about 45 million tons in 2008 to 32 million tons in 2016. Weak economic markets for coal both in the U.S. and internationally contributed to the decline. Coal-fired power generation is in decline, as inexpensive natural gas and cheaper renewables fuel more electricity production. In addition, air quality regulations have accelerated. The future of Montana coal economics depends in large part on greenhouse gas regulations, use of coal-fired generation in the U.S., natural gas prices, and coal export markets.

In 2015, Montana sent about half of its coal production by rail to other states where it was burned in coal-fired power plants, according to the EIA. Since 2007, Michigan, Minnesota, and Montana used about three-quarters or more of all the coal mined in Montana for energy generation. The remainder likely was either exported to western Canada, where much of it continued to Asia or was exported through traders and brokers. Most Montana coal that goes overseas is shipped to the Westshore Terminal, a British Columbia coal port off the shore of Vancouver.
